bsk has specialised in the manufacture and sale of welding studs for over 30 years. Following a merger with BTV Putz GmbH with its decades of experience in the construction of special CNC automatic stud welding machines, the course was set for the future to continue to meet growing global market requirements.

An innovative development department with a modern equipment production line and CNC special machine construction department at our new site in Eppingen have contributed to the continuous expansion of our product range.

This enables us to supply at short notice a complete range of stud welding units –

from compact hand stud welding units through to large CNC and special

equipment. A dynamic team of experienced stud welding experts, welding

engineers, consultants and electronic engineers are available to answer any

questions concerning stud welding. Welding studs Advantage of Process Clinching
